WT1; therein, the documents indicate that the antisense DNA associated with the sense strand of WT1 is capable of inhibiting the proliferation of tumors.

Such being the case, the inventions set forth in claims 1 and 4 of the present application are disclosed in documents 1 to 3.

Inventive Step

Claims 1 to 6

It would have been easy for a person skilled in the art to conceive of using RNAs instead of the antisense DNAs that are specifically mentioned in documents 1 to 3.

Meanwhile, document 4 indicates that it is possible to treat tumors by using siRNA in order to specifically inhibit the expression of a tumor gene.

As a result, the technique whereby RNAi is used to inhibit the expression of tumor genes would have been well known to a person skilled in the art of the technical field associated with pharmaceuticals prior to the priority date of the present application, as disclosed in document 4. Furthermore, it is common practice for a person skilled in the art to specify the sequence of RNAi. Such being the case, it would have been easy for a person skilled in the art to conceive of using the dsRNAs presented in documents 1 to 3, which are complimentary to the transcription product of WT1, in order to treat tumors.

Furthermore, the effects exhibited by the inventions set forth in claims 1 to 6 of the present application cannot be considered to be so significant as to have been impossible to predict in the light of documents 1 to 4.
